PROFILE

I have always aspired to be the sought-after person in my life. Therefore, in my professional life, I strive to achieve this. I aim to be objective, learn from my mistakes, and take the necessary steps. I endeavor to write quality and clean code, making an effort to stay current in my field.

ACTIVITIES AND INTERESTS

- Sail
- Tennis
- Soccer
- Computer Games
- Comic books

KEY SKILLS

Languages

- C#
- JavaScript
- CSS - SASS
- HTML

Frameworks

- .NET Core
- ASP.NET Core/ MVC
- Node.js
- Vue.js / Nuxt.js
- React Native

Development

- Test Driven Development
- Object Oriented Programming
- Testing with 3A Principle
- Clean Code

Others

- NHibernate
- MSSQL – MySQL – PostgreSQL – Sqlite
- Git - GitHub
- Docker – Kubernetes
- Redis
- AWS(EC2, RDS, S3)

WORK EXPERIENCE

Software Engineer

GC Brains, İstanbul

Hybrid

03.2022 - 03.2024

Throughout my career here, I've had the opportunity to work on two frameworks. I actively participated in the development of one from scratch. My involvement included presenting documentation for these frameworks and the conducted research, as well as contributing to the development of five static websites with Vue.js/Nuxt.js for various purposes. Additionally, I played a role in creating a gateway API from the ground up. Throughout these development processes, I gained experience in areas such as .NET, ASP.NET, TDD, Documentation, NHibernate, and more.

Software Engineer

PROF-IT, Çanakkale

Remote

09.2021 - 03.2022

During my career here, I was involved in the development of a project from scratch, where I experienced ASP.NET MVC and Entity Framework technologies.

Intern

GAMELAB İstanbul, İstanbul

Full-time

06.2019 - 09.2019

During my internship here, I developed three features for the TASO2019 game. This experience provided me with a small but valuable insight into C++ and game programming.

EDUCATION

Manisa Celal Bayar University

Software Engineer

2016-2021

ENGLISH

Reading: B2

Writing: B1

Speaking: B1

Some of the projects I took part in

PROJECTS	WHAT I DID?
• baked.mouseless.codes • mouseless.codes • mouseless.github.io/learn-nuxt • gcbrains.com	I developed all these websites using Nuxt.js. In my projects, I worked with modern frameworks such as Nuxt.js, Vue.js, and Vite.js. I designed and implemented many components, contributing to both styling and scripting. Additionally, I managed state using Pinia. Through the modules, plugins, and prebuild scripts I developed, I provided significant support in enhancing the framework.
baked	I contributed to the development of this framework by implementing various features, fixing issues, preparing documentation, and writing test/deployment scripts. I wrote comprehensive unit tests and end-to-end tests using NUnit, ensuring the framework's reliability and maintainability. To keep the framework up to date, I closely followed industry developments, reviewed relevant documentation, and proposed necessary improvements, contributing to their implementation. In addition to the projects we built to test the framework's usage, I was involved in the development of a Gateway project for a client, contributing to its integration with the framework. Throughout this process, I had the opportunity to actively apply TDD, OOP, SOLID, AAA, Clean Code, and Refactoring principles. Additionally, I gained extensive experience with technologies such as .NET Core, ASP.NET Core, Code Generation, Swagger, OpenAPI, NUnit, NHibernate, MySQL, and SQLite.
Gateway Project	The purpose of the Gateway project developed with ASP.NET was to handle the load of a system integrated with various different systems and feed the main system using a single schema. By being involved in this project, I not only reinforced my knowledge of .NET and test writing, but also gained valuable experience in integrating with different systems and developing middleware.
